

## Hospital Visitation Policies During COVID

**Visitors are an important part of the recovery process if you or a loved one are hospitalized.** Patients with a strong support system may recover faster, have reduced stress, and may be better prepared to return home after a hospital stay.

In response to the pandemic, the Maryland Department of Health issued an order for various healthcare matters regarding COVID-19<sup>1</sup>. The order requires hospitals to establish temporary visiting policies to help reduce the spread. All hospitals must comply with [CDC Guidelines](#) about visitation policies.

This includes limited visiting hours and a restricted number of allowable visitors per patient. Policies may be adjusted at any time based on the severity of community spread of COVID-19. Though policies are facility-specific and may even vary by unit or floor, most hospitals are still allowing at least one visitor or support person for:

- End-of-life patients
- Maternity/obstetrical patients
- Patients in critical condition
- Patients with Special Needs<sup>2</sup>
- Pediatric patients (under 18)

Visiting a friend or family member will be different now than what you may have experienced in the past. Some hospitals are offering virtual visits but if you go in person, be prepared for hospital staff to require one or more of the following:

- Wear a mask
- Confirm that you are over the age of 18 (no children)
- Pass a COVID screener and confirm you are symptom-free
- Limit travel in and out of the patient's room
